Original publisher: Cleveland, Ohio : National Aeronautics and Space Administration, Glenn Research Center ; Hanover, MD : Available from NASA Center for Aerospace Information ; Springfield, VA : National Technical Information Service distributor, 2003 OCLC Number: (OCoLC)56837350 Excerpt: . . . HIGH TEMPERATURE TESTING SET-UP FOR SHTB With regards to SHTB testing at elevated temperatures, very little previous work exists in the literature (see for example the work by Rosenberg et al. , 1986). In the present investigation, in order to conduct the elevated temperature tests the ends of the incident and transmitted bars were replaced with impedance matched precipitation hardened Inconel 718 inserts (see Figure 9). The Inconel 718 inserts allow extension of the threaded specimen grips to high temperatures and impedance matching helps to avoid wave dispersion that may occur as a result of a change in mechanical impedance at the 4340 steel and Inconel 718 interface. The specimens were heated using induction heating technique by using a water cooled Httinger TIG 10 100 RF generator. This generator uses 3-phase 230-V power line and delivers a maximum power of 10 kW at 100 kHz. The power is coupled to the specimen by using 0. 125 copper tubing coils. In the present study, a coil of 0. 5 inside diameter and. 35 long (two round turns) was used. To avoid damaging the semiconductor strain gages (attached to the transmitted bar) by coil current, the coil was insulated from the bars by using ceramic pieces having 0. 125 diameter and 0. 5 long. The temperature of the specimen was monitored by thermocouple wires attached to the specimen surface. Figure 7: Schematic of Split Hopkinson Tension Bar at Case...
